- Reduces admin and inefficiency
- Easy training and roll-out due
to suitability for purpose
- Saves time
- Saves money

Product Overview:

In the same way that a tailored suit fits you perfectly, *BespokeSOFTWARE* fits your business. Off the shelf software can often solve most of the problem for you. However, what hasn't been solved will require you to change your procedures and practices, or create a series of new problems.

Tailored software from Advance IT Group fits around your business, to make your processes better, not vice versa.

For 15 years, creating and writing *BespokeSOFTWARE* has been core to our organisation. We work across a wide range of businesses and industries.

But we are more than a team of very good software developers.

Our real skill is in understanding your business, your processes, your problems, your challenges and your aims and

developing software to suit.

It is this skill that sets us apart.

Armed with the understanding of what you face and what you want to achieve, we then go away and develop the software solution that is right for you. Cost Effectively. What's more we guarantee this software.

Having worked within a wide range of industries, we are able to share best practice and solutions.

Industries in which we have worked include: energy, renewables, pneumatics, manufacturing, trade associations and landscaping. We have worked with clients of all sizes from SME's to multi-national organisations. Much of our work has involved integration with other systems, both mass market, legacy and bespoke to provide a true flow of information through an organisation.
