- Measure against audit and compliance

### Key Benefits:

- Provide evidence of performance
- Review powerful information to aid management decisions
- Ensure reputation
- Resolve problem areas fast
- Be ready with evidence/facts when required
- Save time
- Save money

### Product Overview:

The PAMS system makes the day to day running and maintenance of property assets as seamless and fluid as possible. The *CustomisedREPORTS* module allows performance trends to be identified and longer term management and strategic decisions to be made.

Although reports are already available within the *Central Asset DATABASE* to help achieve performance on a daily basis, the *CustomisedREPORTS* module provides powerful information to aid management decisions.

It is all well and good having a treasure trove of information in PAMS. The benefit is muted however, when a manager has to spend hours or days trawling through data to produce each report.

The *CustomisedREPORTS* module enables extremely powerful reports to be created and customised to either your exact specifications or to reporting formats required by the client. *CustomisedREPORTS* fully understands that information requests can be very specific and often changeable, '000's of jobs and calls can

be interrogated in a matter of seconds to provide executive summaries with the ability to drill down into detailed information. Problem areas can be selected, with a single click providing a list of all the issues, so remedial action can be taken.

*CustomisedREPORTS* are all in the format and style you, or client requests.

Example *Customised Reports* Include:

- o KPI reports
- o Deficiency Reports
- o Financial
- o Audit
- o Compliance
- o Performance

If the owner of PAMS requires it, when combined with *Integration*, all reports and performance information can be shared seamlessly with the client.

Clients reporting requirements can change, or they might require a complex one off report. *CustomisedREPORTS* allows this to be provided for.
