- Cost effective

- Flexible software and delivery

- Expandable and modular

- Simplifies asset management

Key Benefits:

- Saves time

- Saves money

- Track and understand your assets better

- Become more efficient

- Reduce losses

- Help streamline your business processes

Product Overview:

PAMS, our *Property* ASSET MANAGEMENT SOFTWARE has been developed over the last fifteen years for the property industry.

It has proven to be robust, reliable, fast, fit for purpose and very effective at managing assets, planned maintenance and reducing costs.

These core features and benefits apply whatever assets require monitoring. We have versions of our ASSET MANAGEMENT SOFTWARE within the education and the media industry.

The core of the software is the *Central Asset* DATABASE. This houses your assets and we will design it to meet your needs. Whatever assets your organisation has, they will need logging and certain actions need to take place, whether you carry out maintenance, or simply need to track and record equipment.

A log needs to be kept of who, what, where and when. Our history of understanding business

requirements to deliver the correct tailored software solution, ideally places us to match our software to your needs. This is all delivered at a very competitive price.

AMS is capable of being delivered via LAN, WAN or even over the internet. We can also integrate technology into our software for a fit for purpose approach such as bar code scanners, QR Codes, RFID and smartphone apps.

When allied with the extra features gained from adding additional modules, such as *TeamSmart*MOBILE, *TeamSmart*PLANNER, *Sure*ACCESS, *Smart*FORMS, *Customised*REPORTS and *Integration*, AMS is a very powerful, cost effective asset management tool.

More specific details on the *Central Asset* DATABASE and the optional expansion modules are available in the brochures detailing the PAMS range and how these benefit the property maintenance industry.
